

web/pub/cms.php. At the same level of the file cms.pub put a list of folders with files. Now you can access them in a nice interface through the web. In this file you can create any folders with all the files you want, add them to the list and make them appear in the right place. As in the previous version, I created a directory with the database in the admin.php files. This is convenient because in this directory I can search for the files I want from different categories. To search for files in this directory, use the find command. It brings up all the files in the directory. After searching in this directory you can run the command rmdir
